**SECOND DECLARATION OF IAN ROCK IN SUPPORT OF
DEFENDANT'S MOTION TO DISMISS**

I, Ian Rock, hereby declare as follows:

1. I presented a first declaration in this case on June 7th, 2023. I have reviewed OBM's response brief filed on June 30th, along with the declaration from Dan Lawrence. In this declaration, I reply to certain points in those documents.
2. In his declaration, Mr. Lawrence states that around the summer of 2022, Foreman began running "in a customer's Fort Stockton, Texas facility" and "this customer also works with Lancium." This seems to confuse the relationship: as I stated in my first declaration, the Fort Stockton site is a Lancium Clean Campus, owned by Lancium. Individual customers (like bitcoin miners) can locate there, and benefit from both operational management and power management, with power provided by clean energy co-located there. Lancium contracts with a company to run the day to day operations for the entire site, and they use Foreman to do so. The power management is done through Lancium Smart Response software, not

Foreman. As I stated in my first declaration, Lancium requested OBM's SOC 2 report to make sure Lancium was running the Ft. Stockton site properly, not for any purpose related to our partnership discussions.

3. In his declaration, Mr. Lawrence states that on our November 17th meeting, I told him “that customers using Foreman could be infringing on Lancium’s patents.” I did not say that, or anything like it. As I stated in my first declaration, I did not even mention patents during this meeting. Mr. Lawrence states that I said the two companies should talk because “because CLR and energy management was Lancium’s specialty and OBM was ‘undervaluing’ energy management by offering it for a price lower than the price Lancium was offering it.” I do not recall saying this—if anything, this would be out of context, and relate to OBM’s miner management price. At the time, I did have an understanding that miner management software garnered a lower fee than our Lancium Smart Response did; I would have meant that by providing a package of miner management *and* power management with us—rather than *just* providing miner management on its own—OBM would get more value. Mr. Lawrence says he “took this to mean that Lancium saw Foreman as a threat to its business.” He never said that to me. I can say throughout my conversations with Mr. Lawrence, I did not see Foreman as a threat to our business, but as a potential business partner where both companies could make more money—that is why I kept trying to talk to him and explain what we were thinking.

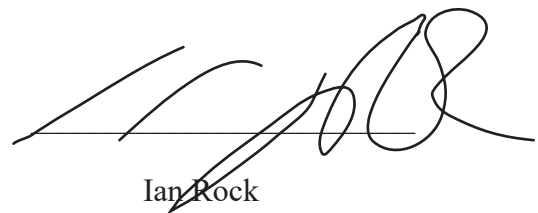

4. In addition to the emails I provided along with my first declaration, I also still have my text messages with Mr. Lawrence. I took screenshots of this text conversation. A true and correct copy of these screenshots is attached as Exhibit 19. As shown in the exhibit, first Mr. Lawrence texted me on November 18th, 2022 (giving me his number). We then exchanged messages on November 29th, 2022, and I texted him again to follow up on December 5th, 2022 (I did not get a response). We exchanged further messages on January 5th, 2023, and I texted him on February 2nd, 2023 to follow up (I again did not get a response). On April 4th, I texted him Michael McNamara's contact information.
5. In his declaration, Mr. Lawrence said on March 8th, 2023, I "pulled [him] to the side, and said that we needed to have a chat." As I stated in my first declaration, I believe we spoke on March 9th, 2023, not March 8th. In any event, the way he writes it seems to be suggesting I was aggressive or threatening him. That is not true. I may have said something to the effect of us needing to talk again—but that would only have been because I had been trying since November 17th to have a follow-up conversation with him. After many emails and texts, I was glad to finally catch him. As I discuss in my first declaration, our conversation was friendly, and all about our proposed collaboration.
6. Mr. Lawrence's declaration may be suggesting that my email to him on March 28th, 2023 was triggered by his appearance on a podcast that day. I do not recall if I even heard the podcast at that time. The reason I reached

out was to follow up from our meeting on March 9th, where Mr. Lawrence and I agreed to have a follow-up meeting when he was back in town, but I had not heard back from him for a few weeks.

7. Mr. Lawrence states that on April 4th, he and I had a short phone call, where I said Lancium “would send business terms soon.” I do not recall saying that. As I state in my initial declaration, the purpose of my April 4th call with Dan was to get him to agree to talk with our CEO, Michael McNamara, and that was the next step, not sending terms. (This is why I shared Michael’s contact with Dan on April 4th, so that he would recognize the number when the call came in).
8. I declare under penalty of perjury that the forgoing is true and correct to the best of my knowledge.

Executed on this 6th day of July, 2023.

**SECOND DECLARATION OF SCOTT MCFARLAND IN SUPPORT OF
DEFENDANT'S MOTION TO DISMISS**

I, Scott McFarland, hereby declare as follows:

1. I submitted a previous declaration in this case on June 5th, 2023. I have reviewed the declaration of Dan Lawrence submitted by OBM on June 30th, 2023. Here, I respond to certain statements and characterizations in his declaration.
2. In his declaration, Dan discusses our April 26th call. That was our first introduction to one another, and I do not recall him saying or suggesting that Lancium was delaying. I had just joined Lancium on March 27, 2023, and while I had a longstanding background in sales, I was new to this industry, learning about CLR capability and miner management functionality for the first time. I also was not aware of whatever Dan might have shared with others at Lancium in his prior conversations. Without a strong understanding of Foreman's capability and go-to-market, I was not at the stage in this first call to offer partnership terms, as they likely would not be as well aligned as they could be for both of us and our possible

customers. When proposing a business deal, my goal is for the terms to be both well-received and also not out of proportion to the recipient's existing relationships and financials. To do that, in the April 26th call, I wanted to get more information about OBM's current relationships and business. However, Dan did not provide that, giving only basic information, stating he was "interested in what we were thinking" and that "he wanted to see numbers." This made it more difficult for me to craft and provide appropriate terms.

3. As I discuss in my first declaration, after talking with Dan on April 26th, I suggested we meet for drinks and a further discussion at the Bitcoin 2023 conference on May 18th. In his declaration, Dan states that I requested that Ian Rock attend that discussion. That is incorrect. I invited Callum Rock, our Business Development Manager (because it was a business development conversation). This is shown in the Google calendar notification that I included as an exhibit to my first declaration. Ex. 16. Ian Rock was not in Miami or in attendance at the conference; I never intended for him to participate nor did I invite him.
4. In Dan's declaration, he states "When I asked what would happen with customers under 50 MW, or customers that cannot participate in CLR based on their load profile, Mr. McFarland's response was: 'we could probably build a cloud connector where we integrate with the CSPs and send the signal to turn on/off to Foreman.'" I am not sure what the "cloud connector" term refers to. I did not use that terminology. I believe Dan is mixing two

separate items together in his statement: one being a suggestion of how we could help customers without CLR capability (the lack of fast-response capability) and the other being customers who are CLR capable, but that use <50 MWs. (As another note, our proposal's focus was on potential joint customers in ERCOT in Texas.)

5. With respect to non-CLR customers: Not all data centers are capable of doing CLR, which requires the ability to change power usage very quickly, referred to as fast response. Our primary interest in talking to Dan was collaboration for CLR customers. But, he asked if there could be a way to use Lancium's software to also benefit non-fast response customers, so I responded with a way we could do so, if they were interested. Specifically, I said we could create a cloud-based (off-premises) offering of our Lancium Smart Response software and integrate with the Foreman platform for basic demand response. I believe this is what OBM does in their relationship with their other demand response partner, Voltus. Dan and I even discussed that we would need to do some API integration work for the software to work together, but that should be a light lift for both companies. I explained this could still be a value-add, with Lancium's sophistication in certain aspects of power management. I did not say OBM or any non-fast response customers would be required to use this option, or that this was a necessary part of our proposed relationship—Dan is the one who brought this up, so I suggested a potential option.

6. For customers that want to do CLR (fast-response), we prefer to have our software running on-premises on our servers for the customer so that we can instruct necessary power changes within very short time frames as required under CLR operation. . Our target customer base for using Lancium Smart Response in CLR capability would be customers with >50 MW of power usage. This is because, in general, these customers represent a sufficient revenue potential in order to spend our sales time and engineering efforts. This was a general guideline that I used to determine where we spent our sales time efforts and engineering efforts. The >50 MW target has nothing to do with CLR capability or a “cloud connector” or a cloud version of our software. I never stated to Dan that our proposed partnership would preclude OBM from working with customers under 50 MW on their own (as I discuss in my first declaration, I made clear that our proposed relationship was non-exclusive). The 50 MW threshold just related to the size of potential customer we would plan to pursue as potential joint customers.
7. Dan reports that I proposed a “90/10 split on the CLR revenue, with Lancium receiving 90% and OBM receiving 10%,” and says the “terms were extremely non-favorable to OBM.” This is the split I proposed, but his discussion is misleading. First of all, as I explained in my first declaration, this is not how Dan actually reacted when I presented these terms. But also, these terms actually were very favorable to OBM. Under our proposed relationship, customers would be buying both Foreman from OBM, and

Lancium Smart response from Lancium. OBM would get 100% of the revenue from the Foreman portion of the sale, Lancium would get 0%. Then, we would be giving OBM 10% of the revenue from *our* product, Lancium Smart Response. This revenue can be quite significant as the MWs under control increase. The idea was both companies might be getting more customers, so sharing revenue share could be worth it to us. I am still not aware of OBM's revenue and commercial model, because Dan never shared that with me. But, from what I have heard anecdotally, OBM would get significantly more from the 10% of Lancium Smart Response power management revenue per customer than OBM currently gets in total per customer from Foreman miner management.

8. In advance of the May 9th call, I prepared a slide outlining the business terms for our proposed relationship. This is the document I intended to send Dan if he had returned the NDA I sent him on May 9th. I had a printed copy of this slide in front of me while talking to Dan on May 9th, and, while we were on the phone, I took handwritten notes on the paper of things Dan said. A true and correct copy of this slide with my contemporaneous notes is attached as Exhibit 20. To point out a few of my handwritten notes: the one on the bottom left reads "No exclusivity w/ voltus." This captured Dan's confirmation that OBM's existing power-management relationship with Voltus was non-exclusive, so they could also enter a (non-exclusive) relationship with us. My note in the bottom middle reads "Needs to look @ other chanl agmts." This captures part of Dan's response to the terms I

outlined, stating he needed to compare it to their other existing channel agreements. My note in the bottom right reads “not too much indigestion over agmt like this.” This was the other part of Dan’s response to the terms, as I noted in my first declaration.

9. Exhibit 20 contains sensitive commercial information that is not publicly available, including Lancium’s pricing and revenue for projects. Publicly disclosing this information could cause commercial harm to Lancium, for example by allowing competitors to undercut Lancium’s pricing.
10. I declare under penalty of perjury that the forgoing is true and correct to the best of my knowledge.

Executed on this 6th day of July, 2023.

**DECLARATION OF BRANDON GREENFIELD IN SUPPORT OF
DEFENDANT'S MOTION TO DISMISS**

I, Brandon Greenfield, hereby declare as follows:

1. I am the Director of IT Security & Compliance at Lancium. In September 2022, I was the IT Controls Manager. My responsibilities included making sure that any system connected to Lancium's network had appropriate controls to ensure compliance, security and operating effectiveness. This included compliance with data security and data privacy regulations, handling of financial and other data subject to the Sarbanes-Oxley regulation, and other regulations. I have never had any role at Lancium relating to intellectual property or patents, or relating to business development.
2. I have reviewed a portion of OBM's brief filed on June 30th where they discuss my access to Foreman, and request for OBM's SOC 2 report, along with the portion of Dan Lawrence's declaration discussing the same. I submit this declaration to explain my involvement, and clarify suggestions made in their brief.

3. Lancium owns a Lancium Clean Campus site in Fort Stockton, Texas, where bitcoin miners or other data centers can locate their machines. Lancium contracts with a company, Digital Carpenters, to operate and monitor the site on a daily basis. Digital Carpenters uses the OBM Foreman software for automation and management of the bitcoin miner customers at Fort Stockton, and they use our Lancium Smart Response software for any power management functions.
4. Because the Fort Stockton site is on the Lancium network, I needed to be familiar with what controls need to be in place to be sure the software is appropriately secured, and being used appropriately. As an initial step, on August 25, 2022, I spoke with John Mathews from Digital Carpenters, and then sent him an email asking for a more in depth call to understand the IT controls and security. A true and correct copy of that email is attached as Exhibit 21. We realized there were certain questions they didn't know the answers to, so John emailed connecting me with Dan Lawrence from OBM, on September 12, 2022. Mr. Lawrence responded that day, offering to provide a SOC 2 report, and to talk by phone. A SOC 2 (Service Organizational Controls) report is a standard compliance reporting document for an offering, focused on its security, laying out the data security and other measures deemed appropriate to follow.
5. I responded on the morning of September 13th, taking him up on his suggestion of providing their SOC 2 report. He did not immediately respond, so I emailed him again on September 15th. Mr. Lawrence

responded that day, stating we needed a non-disclosure agreement in place.

I replied asking if he wanted to use our NDA, or if he had one. He did not respond, so I followed up on September 20th. A true and correct copy of those emails is attached as Exhibit 22.

6. Dan and I scheduled a zoom call, but he canceled it, and it did not occur.

On September 27th, 2022, he sent me an invite for a zoom call. A true and correct copy of that invite is attached as Exhibit 23. Mr. Lawrence emailed me on September 29th, apologizing for the email chain fizzling, cancelling our meeting, and attaching their NDA. I sent him a revised version later that day. Myself and Ian Rock from Lancium had to follow up numerous times over the next few months. I was personally on email threads into January, 2023 for this purpose. I have reviewed the first declaration of Ian Rock, and Lancium's Exhibits 2-6. These are consistent with my understanding of the timeline, and accurately reflect the emails I was copied on during this time to try and get the SOC 2 report. Ian Rock forwarded me the SOC 2 report received from OBM on February 27th, 2023. A true and correct copy of the email attaching the SOC 2 report is attached as Exhibit 24, and a true and correct copy of the SOC 2 report itself is attached as Exhibit 25. My only involvement in correspondence with OBM surrounded trying to get the SOC 2 report, for our internal compliance purposes.

7. OBM also discusses the fact that I had access to Foreman. Again, as Fort Stockton was a Lancium owned site, we needed visibility into how the site was operating, whether the customers' assets there were online and working

as expected, and to ensure Foreman was being used in line with appropriate data security measures. I received limited access to the Fort Stockton Foreman software on September 12, 2022, for this purpose. My access allowed me to see the activity of the miners operating at Fort Stockton, and whether they were up online (mining for bitcoin, called “hashing”) as expected, or having issues.

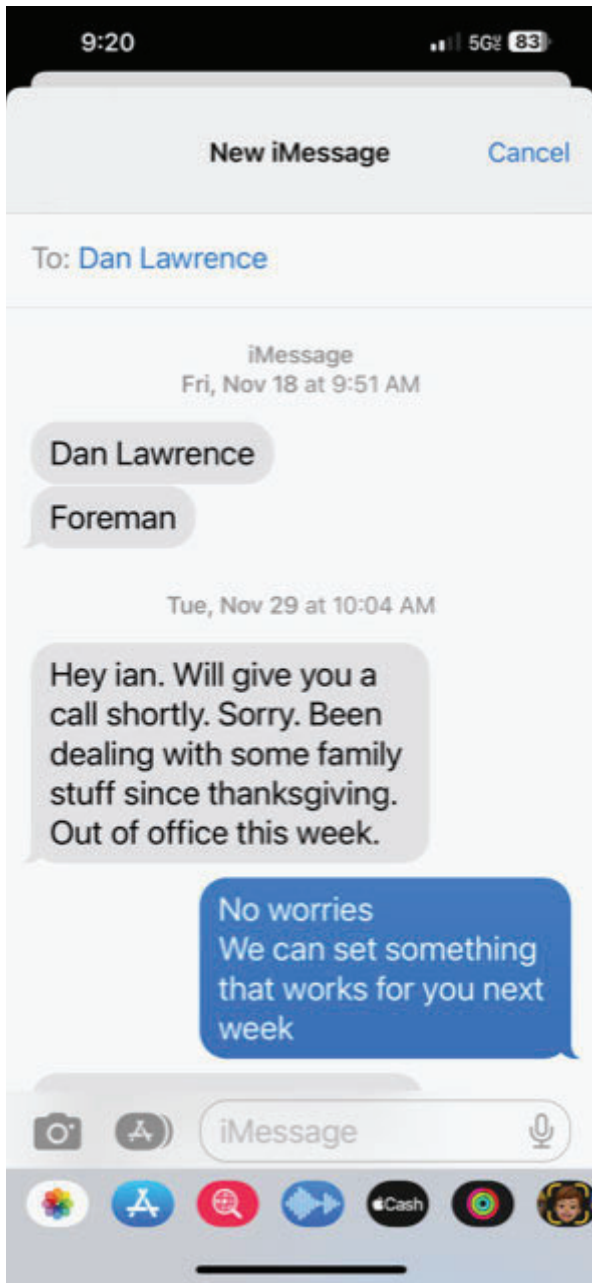

8. From September 2022 into January 2023, I regularly logged in for this purpose. I do not have access to the Foreman code, I do not have access to the host machine, and I do not know what kinds of power management Foreman is capable of. I have only seen the implementation of Foreman at the Fort Stockton facility, and it is not used for any power management functions there.
9. I declare under penalty of perjury that the forgoing is true and correct to the best of my knowledge.

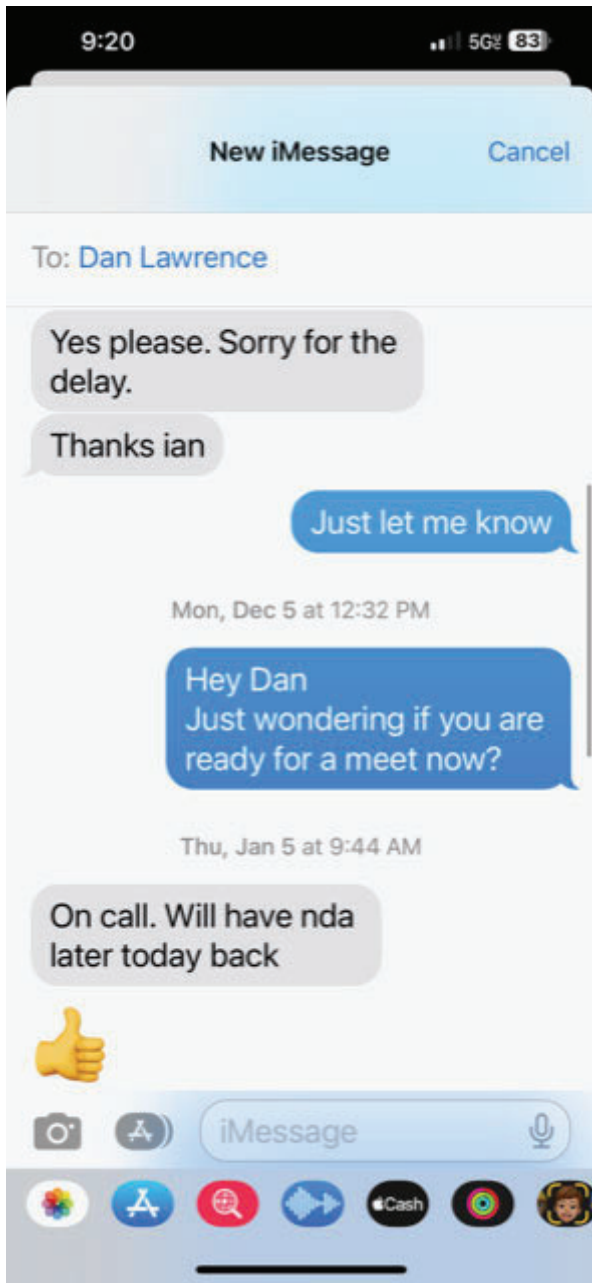

Executed on this 6th day of July, 2023.

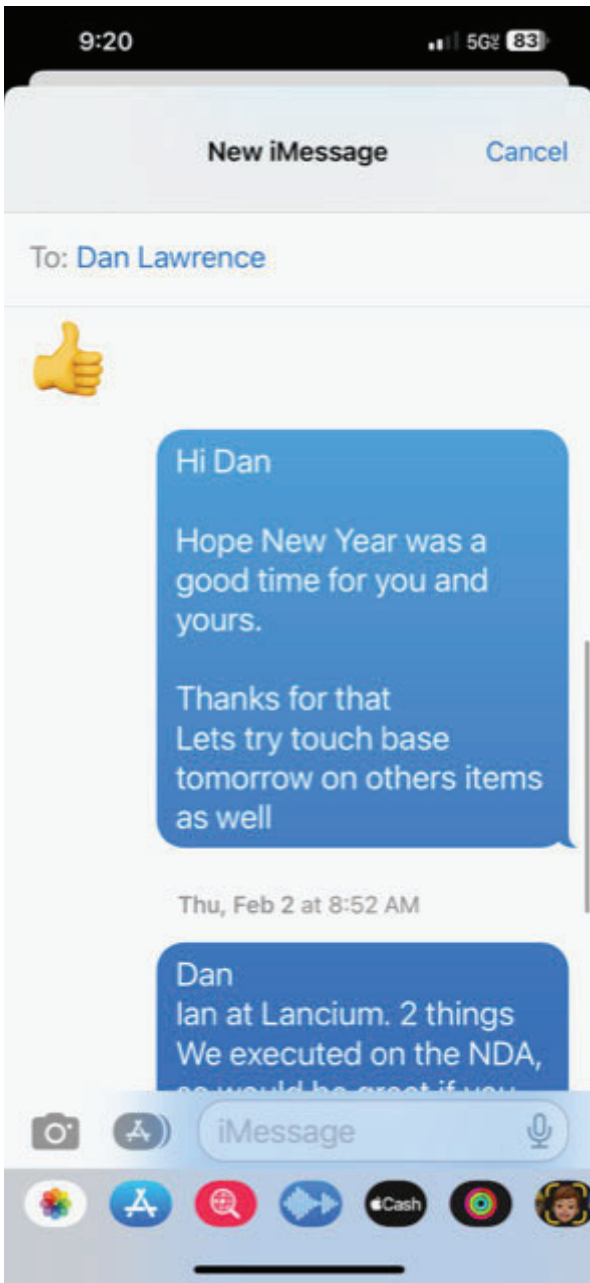

A handwritten signature in black ink, appearing to read "Brandon Greenfield", written over a horizontal line.

Tuesday of next week at 3 pm CT work?

On Thu, Aug 25, 2022 at 11:54 AM Brandon Greenfield <brandon.greenfield@lancium.com> wrote:
Hello John,

Thank you for the Foreman walkthrough today. It was great to see how the tool improves your operations. As I mentioned at the end of the meeting, I'd like to set up a call to understand more about the IT controls and security of the tool. My schedule next week is reasonably open/flexible. Let me know what works for you and your team. Operations comes first in my mind, so we do not need to rush or squeeze in the meeting. I've included some of the topics below for your reference.

Topics to Discuss:

- Access rights:
 - Who has access?
 - What rights/privileges do they have?
 - Who are the administrators?
 - Can we build custom roles?
 - Who can change miner pool data? Can we set up an alert for those changes?
 - How is access requested/created
- What other systems does it interface with?
- How is data retained? Backups?
- Audit logs
- Miner Password query
- Changes
 - Who can write code?
 - How is it tested/approved?
- Foreman Company
 - Do they have a third party audit of their environment?
 - SOC Report? ISO?
